

5000L Stainless Steel Water Treatment Filter Tank

Sold as a Pair / Complete Unit

Product Overview

The 5000L stainless steel water treatment filter tank is a durable industrial filtration vessel designed for water purification, softening, and pre-treatment applications. It is supplied as a pair and sold as one complete unit for industrial use.

Technical Specifications

Specification	Detail
Product Name	5000L Stainless Steel Water Treatment Filter Tank
Unit Type	Sold as a pair / complete system
Capacity	5000 liters per hour (5 tons per hour)
Material	Stainless steel
Working Pressure	Below 0.2 MPa
Application	Water treatment, filtration, softening, and pre-treatment
Media Compatibility	Sand, activated carbon, Na-ion resin
Installation	Industrial water treatment systems

Features

- Stainless steel construction for durability and corrosion resistance.
- Suitable for industrial water purification and softening.
- Supplied as a matched pair and sold together as one unit.
- Compatible with sand, activated carbon, and Na-ion resin applications.
- Designed for medium-scale water treatment operations.

Applications

This tank can be used in industrial water purification plants, bottled water systems, commercial water supply projects, raw water pre-treatment lines, and water softening systems.
